

## Standardised & Special Purpose Equipment used in Nuclear Power Plants during Outage or Decommissioning phase

Gradel is a well-known and trusted supplier of Maintenance Equipment and specific equipment developed adapted to customer needs. Gradel has an excellent heritage of more than 50 years in the nuclear sector and can thus rely on a large background for supplying a key turned solution able to be operated in harsh environment. We have a complete range of underwater cleaning, filtration handling and cutting for nuclear pools. Our latest developments are driven for optimising waste volume and thus costs for the end-user while optimizing the doses for operators. Our capacity of innovation in complex matters, combined with large on field experience leads us to be the partner for your future developments.

We assure the management of the complete project starting with pre-studies, engineering of concepts and detail, supply chain with a large panel of partners for manufacturing, specific know-how in welded constructions in house, assembly and testing realized in house.

We have a team of certified engineers and technicians for realizing after sales services in controlled areas. We are strongly orientated to satisfy our customers and to maintain a healthy team and environment we can rely on. Gradel is applying the procedures as defined in our quality management system ISO 9001, 14001, OHSAS 18001, EN 1090 Exc. 4 CEFRI and KTA1401.
